Icon Intra

Your whole Intranet at the touch of a key

We have given a lot of thought to how the administration, layout and maintenance of an Intranet can be simplified to the extent where it no longer requires a Ph.D. The result is ICON INTRA. All you have to do is put in the content – our software and your IT do the rest.

Intranet – not a book with seven seals?

Intranet – fine, but ...

More and more companies are setting up an Intranet as their main platform for internal corporate communication. Ideally, the knowledge of the whole company is accessible here, sensibly organised, the workflow is optimised, dates are coordinated and information streamed into the proper channels. However, before the process reaches that stage, the people in charge tend to have grey hair because the organisation, running and maintenance of the Intranet are processes which eat into resources. Often people find themselves running around in circles. Instead of saving time and money, both are lost in the everyday friction of trying to run the Intranet.

We take away your headaches

For the fully automatic processing of your corporate information in the form of web pages, we use an excellent content-manager (Obtree C4), which has proved itself on the market. Our special service: we have enhanced it with all the additional functions your Internet needs. The all-in-solution for an Intranet with no frictional losses. Anyone who wants to add content, coordinate dates or send mail simply writes into the prepared text spaces, our programme does the rest.

Modules and functions

Instant Messaging

What e-mail is for the Internet, – instant messaging is for the Intranet. Messages reach their destination within fractions of a second. No-one has to move around delivering routine messages any more.

Forum

This is the place for the virtual exchange of ideas and opinions. Groups can be open or closed, topics can range from the factual and work-related to the more general.

Calendar

This module provides for the fully automated search and co-ordination of dates and appointments. Appointments will be allocated to free slots and slots blocked.

VIP Calendar

Finding and co-ordinating appointment dates for a selected circle of users with the option of setting preference functions.

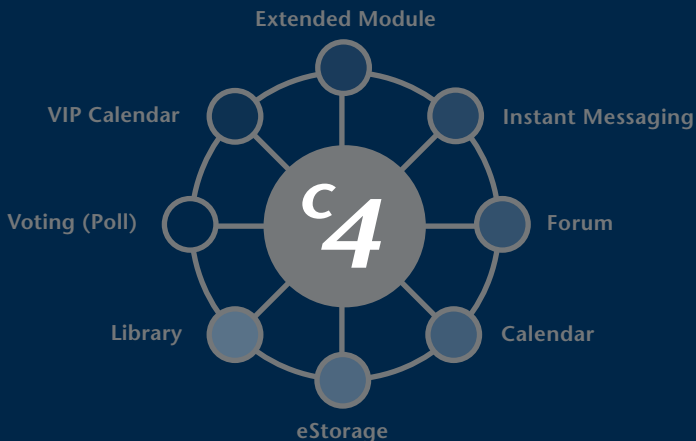

Voting (Poll)

This module is used to facilitate and automate voting and co-ordination processes within the workflow.

Library

Here you will find information on internal and external sources for certain keywords.

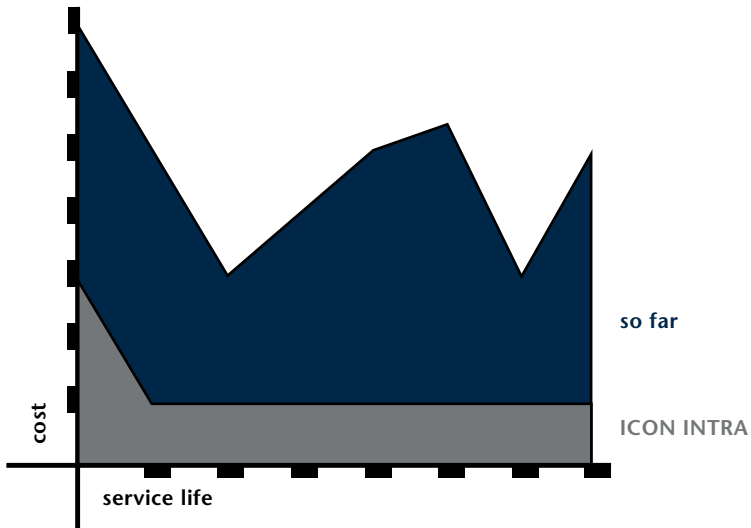

Extended Module

How to save on time and costs

Nowadays, Intranet solutions without a content manager are simply unthinkable. As a rule they are programmed to suit the needs of the individual company by in-house staff. It is this programming work that we take off your hands by using pre-prepared modules, already tailored to work with the content-manager. All you have to do is type in your individual parameters – and your Intranet is ready to run.

The following table will give you an impression of the potential savings:

Bar diagram ICON Intra: sample calculation for an Internet solution with a high-end CMS with company-specific programming requirement and two-year update cycle. Variations possible, depending on company structure and IT policy. For an individual company analysis, please contact ICON- Management GmbH.

Safe and open for future developments

ICON INTRA combines the high safety standards of the tried and tested content-management programme Obtree C4 with the flexibility and user-friendliness of ICON Management-Modules:

You are completely free in selecting your own access criteria and user groups.

You decide who is allowed to put in, change and delete which content.

complete WYSIWYG workflow- and user-management.

Our service for you

Tailoring

We tailor ICON INTRA to your individual requirements, reducing the burden on your IT.

Hosting

We offer you our infrastructure for your Intranet, ensuring the highest availability and reducing your costs.

Advisory service

We analyse your information and IT structure and offer you optimal services on that basis.

Development

We develop tailor-made software-modules for your special requirements and implement them in your ICON INTRA solution.
